EERA Design Tool for Offshore wind farm Cluster (DTOC)

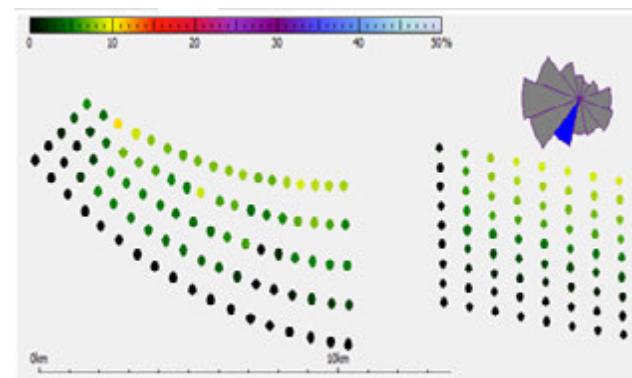

Gregor Giebel, *Senior scientist*
DTU Wind Energy

Support by

- Addressing wind farm developers and strategic planners
- Supporting the user in his/her goals
 - efficient planning of large offshore areas
 - efficient optimization of the layout of offshore wind farms

Support of wind farm optimisation

- ... with respect to
 - wind climate
 - turbine selection
 - turbine spacing and placing
- interaction between wind farms in clusters with respect to energy production
- wind resource, limitations of usage, grid connection
- electrical infrastructure

© DTU

- **Clear workflow** for layout, variation and comparison of variations in wind farm layout, called scenarios
- Integrated **comparative reporting**
- **Multi-user** mode
- Includes **economic calculations** for benchmarking different layout scenarios via the LCOE

Integration task

Total tool overview

Total tool overview – very complex!

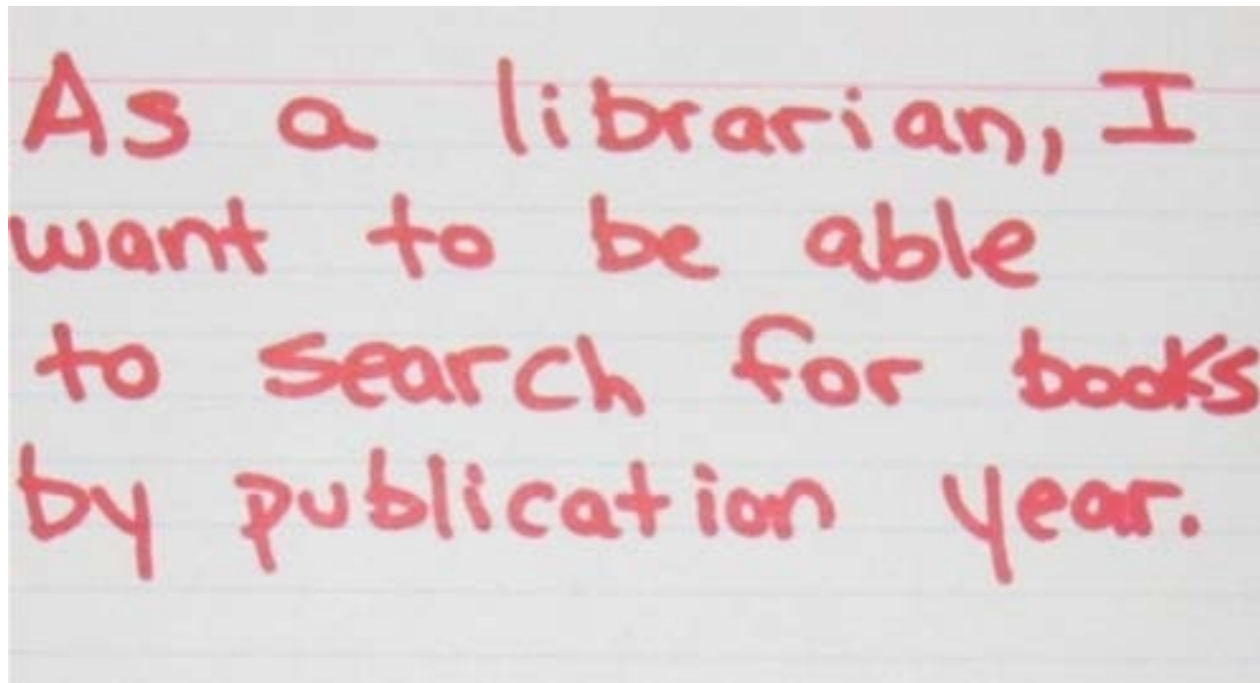

User Requirements

Vision and Work Flow

- A **robust, efficient, easy to use** and flexible tool created to facilitate the **optimised design** of individual and clusters of offshore wind farms.
- A keystone of this optimisation is the precise prediction of the future **long term wind farm energy yield** and its associated uncertainty.

As a <user> I want to be able to <goal>

A photograph of a handwritten user story on lined paper. The text is written in red ink and reads: 'As a librarian, I want to be able to search for books by publication year.'

As a librarian, I
want to be able
to search for books
by publication year.

- As a developer I can determine the wake effects of neighbouring wind farm clusters on a single wind farm.
- As a developer I can determine the optimum spacing, position, turbine model and hub height of turbines within an offshore wind farm.
- As a strategic planner I can determine the optimum strategic infrastructure to accommodate offshore wind farm clusters.
- *14 relevant user stories in total*

- As a developer I can **determine the optimum** spacing, position, turbine model and hub height of turbines within an offshore wind farm.

Software supports the *comparison* of many design scenarios.

Comparative reporting enables selection of optimised configurations.

Score for comparison: *Levelised Cost of Energy*

Optimisation Process

1. Generate Design Options

- Scenario 1
- Scenario 2
- Scenario 3
- Scenario 4
- Scenario 5
- Scenario 6
- Scenario 7

2. Evaluate Design Options

Wake Model

Electrical Model

Energy model

3. Compare Design Options

4. Iterate steps 1 to 3

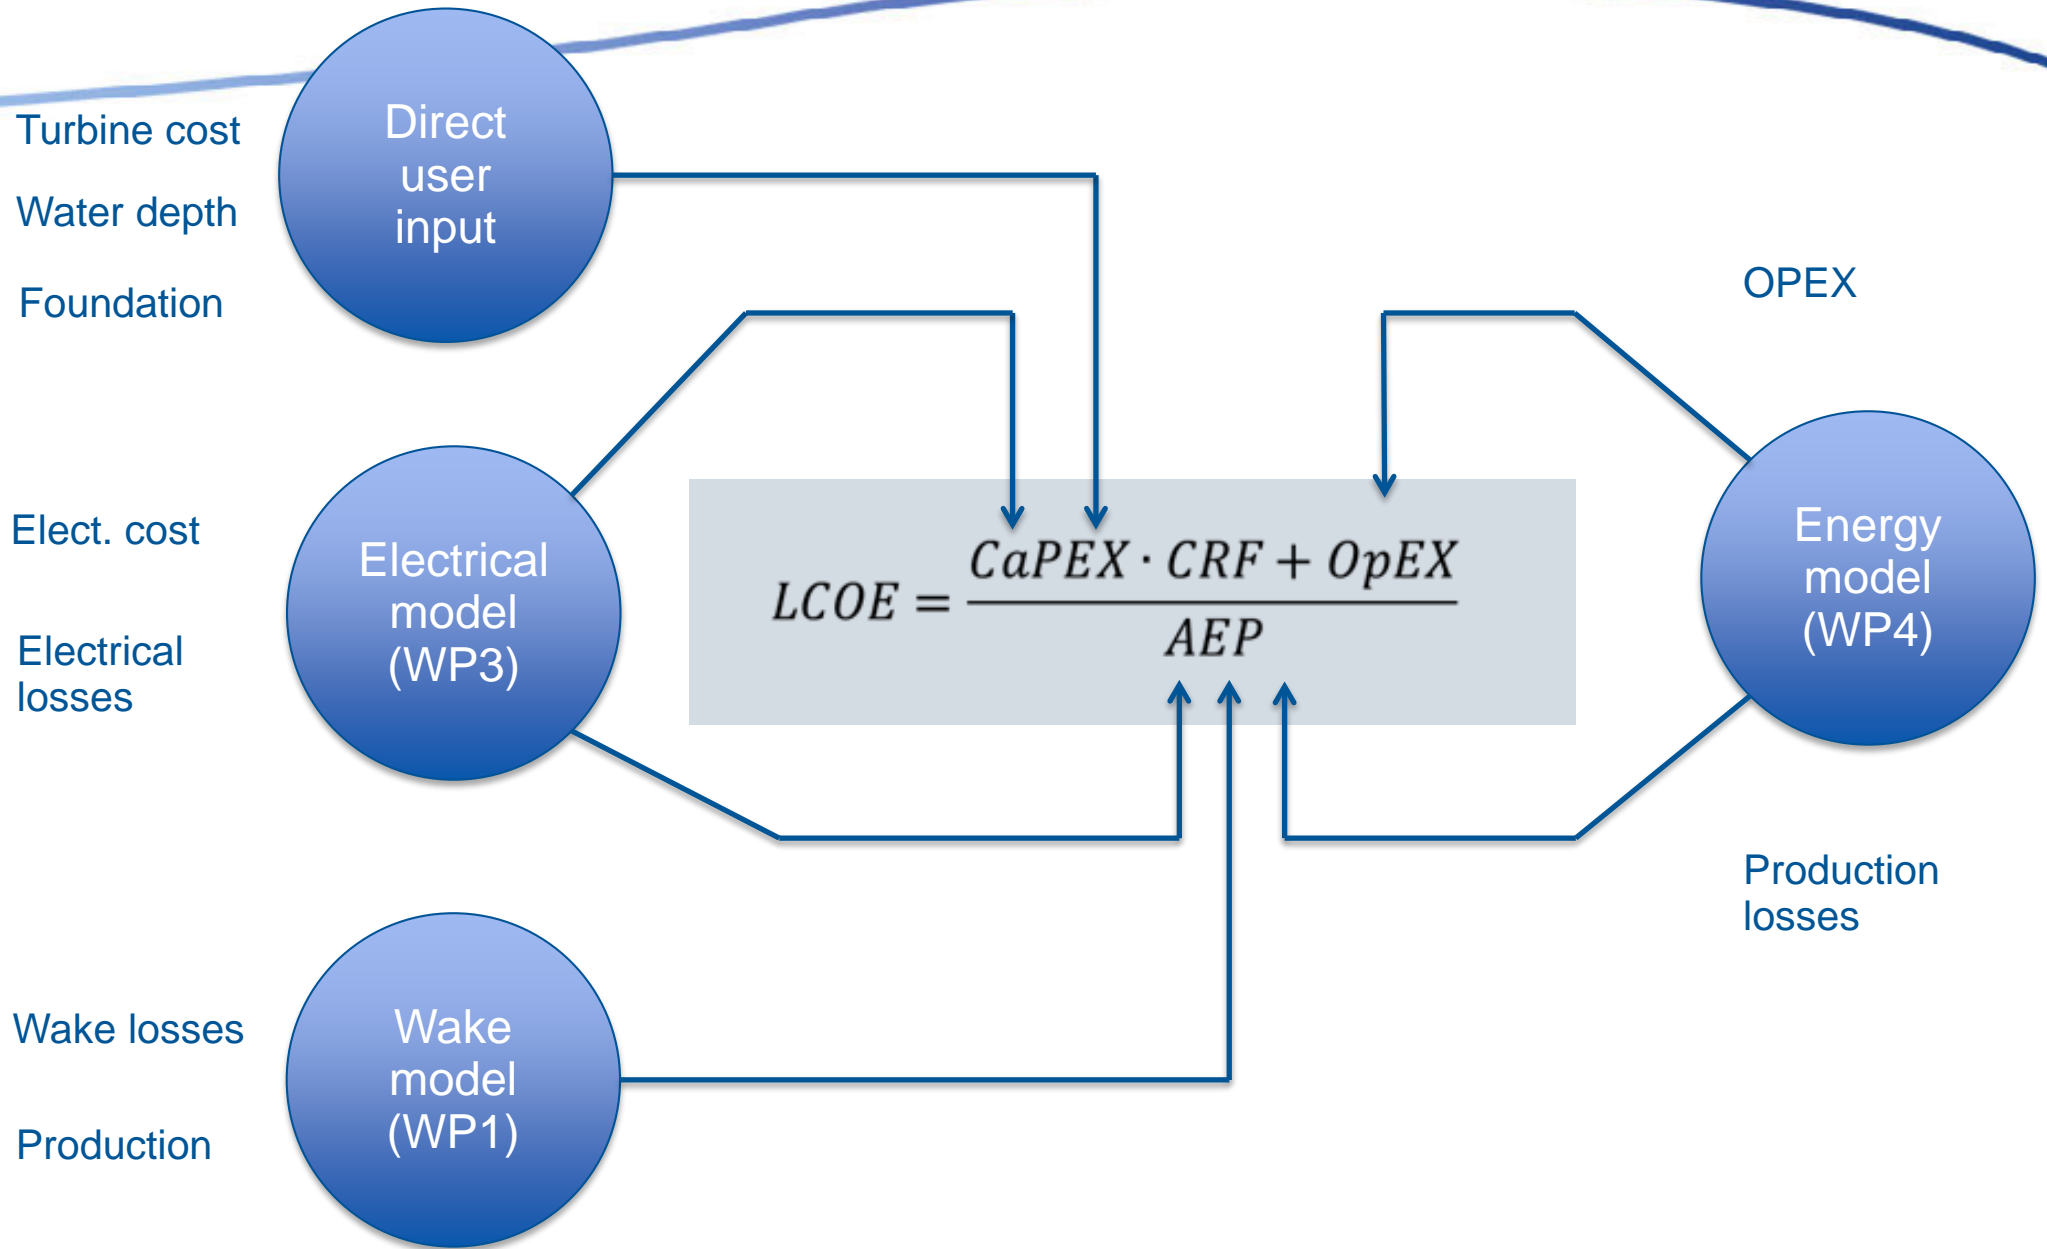

Score: Levelized cost of energy

What decision parameter can we use to compare design options?

Strategic Optimisation

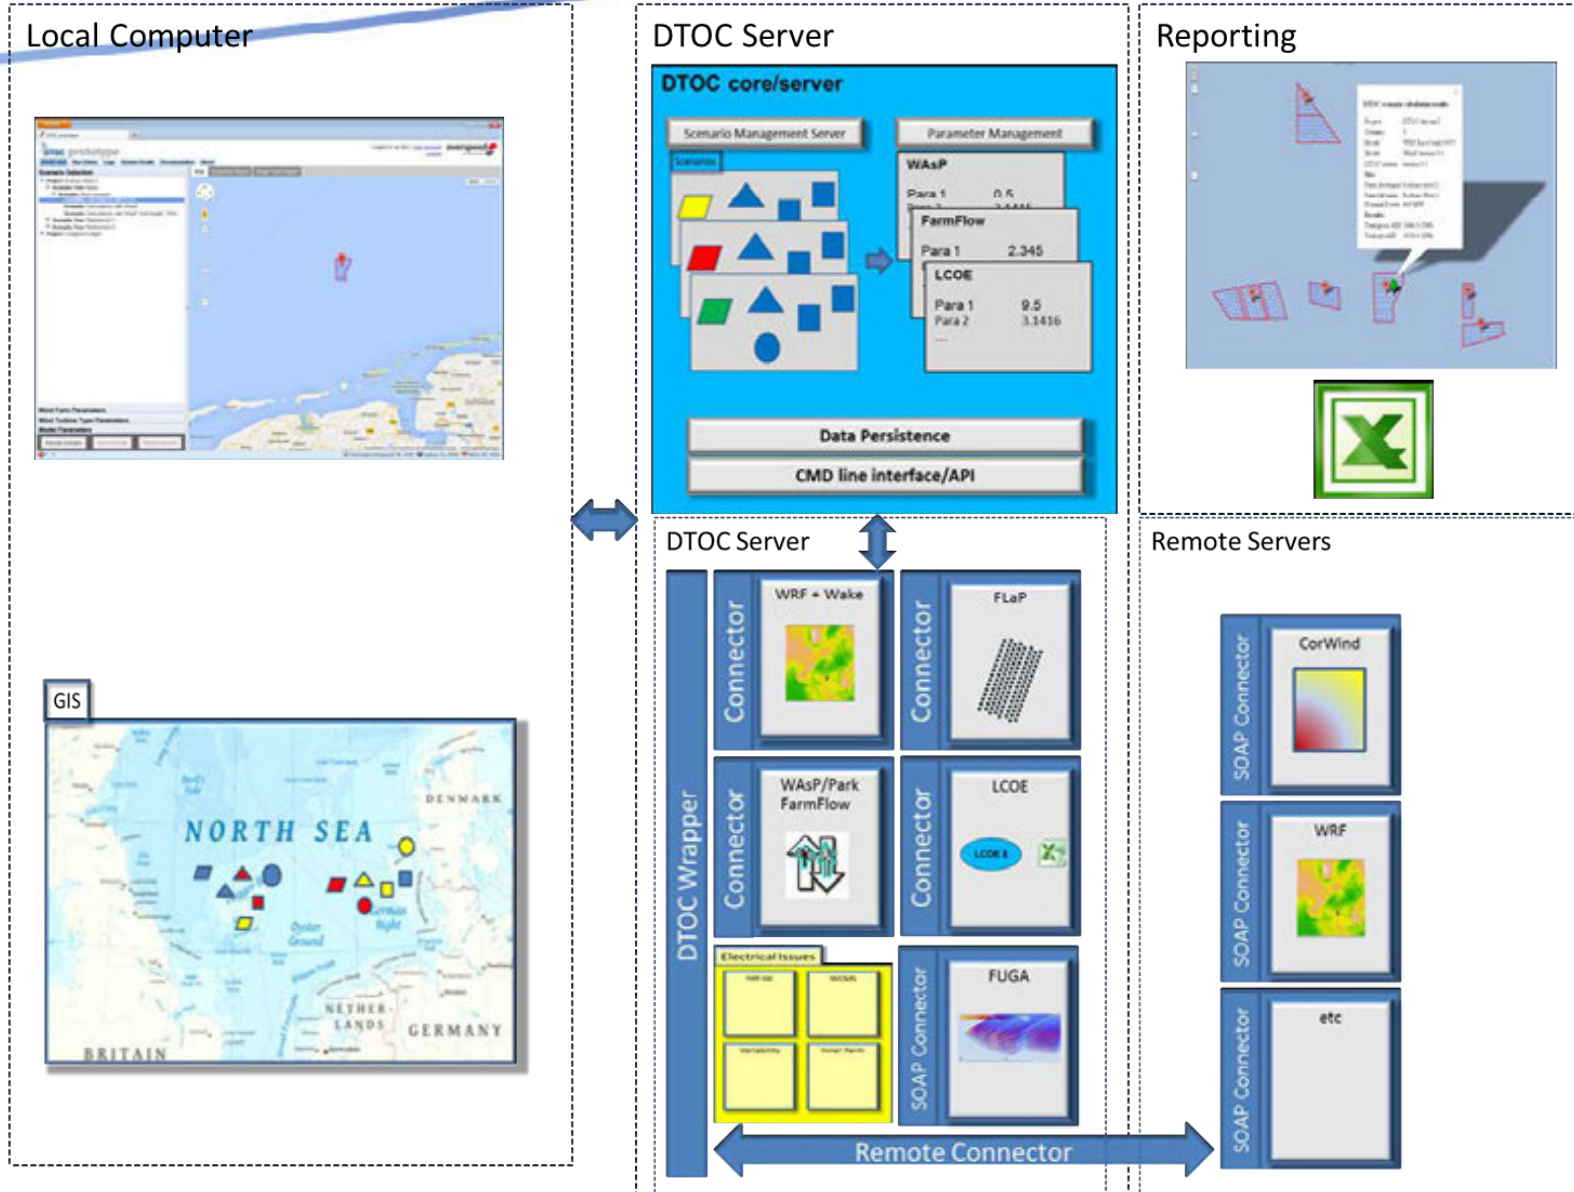

DTOC tool and commercialisation

Commercial tool: Wind & Economy

TOC

The screenshot displays the 'wind & economy' software interface. At the top left is the logo 'wind & economy Strategic Optimisation'. The top right shows 'Logged In as Igor' and the 'overspeed GmbH & Co. KG' logo. Below the header are navigation tabs: 'Wind & Economy GUI', 'Documentation', and 'About'. The main content area is titled 'Scenario: DTOC WP5 Base Scenario meteo WRF' and includes sub-tabs for 'Map', 'Scenarios Report', and 'Single Farm Report'. A project tree on the left lists the hierarchy: Project: DTOC WP5 Base Scenario (Race Bank), Tree: DTOC WP5 BaseScenario Tree, Scenario: DTOC WP5 Base Scenario, Scenario: DTOC WP5 Base Scenario meteo, Scenario: DTOC WP5 Base Scenario meteo WP5, and Scenario: DTOC WP5 Base Scenario meteo WRF. A map of the Norfolk coast is visible in the background. A large white box with the 'wind & economy & Strategic Optimisation' logo is overlaid on the center of the screen. The bottom of the interface shows sections for 'Wind Turbine Type Parameters' and 'Model Parameters'.

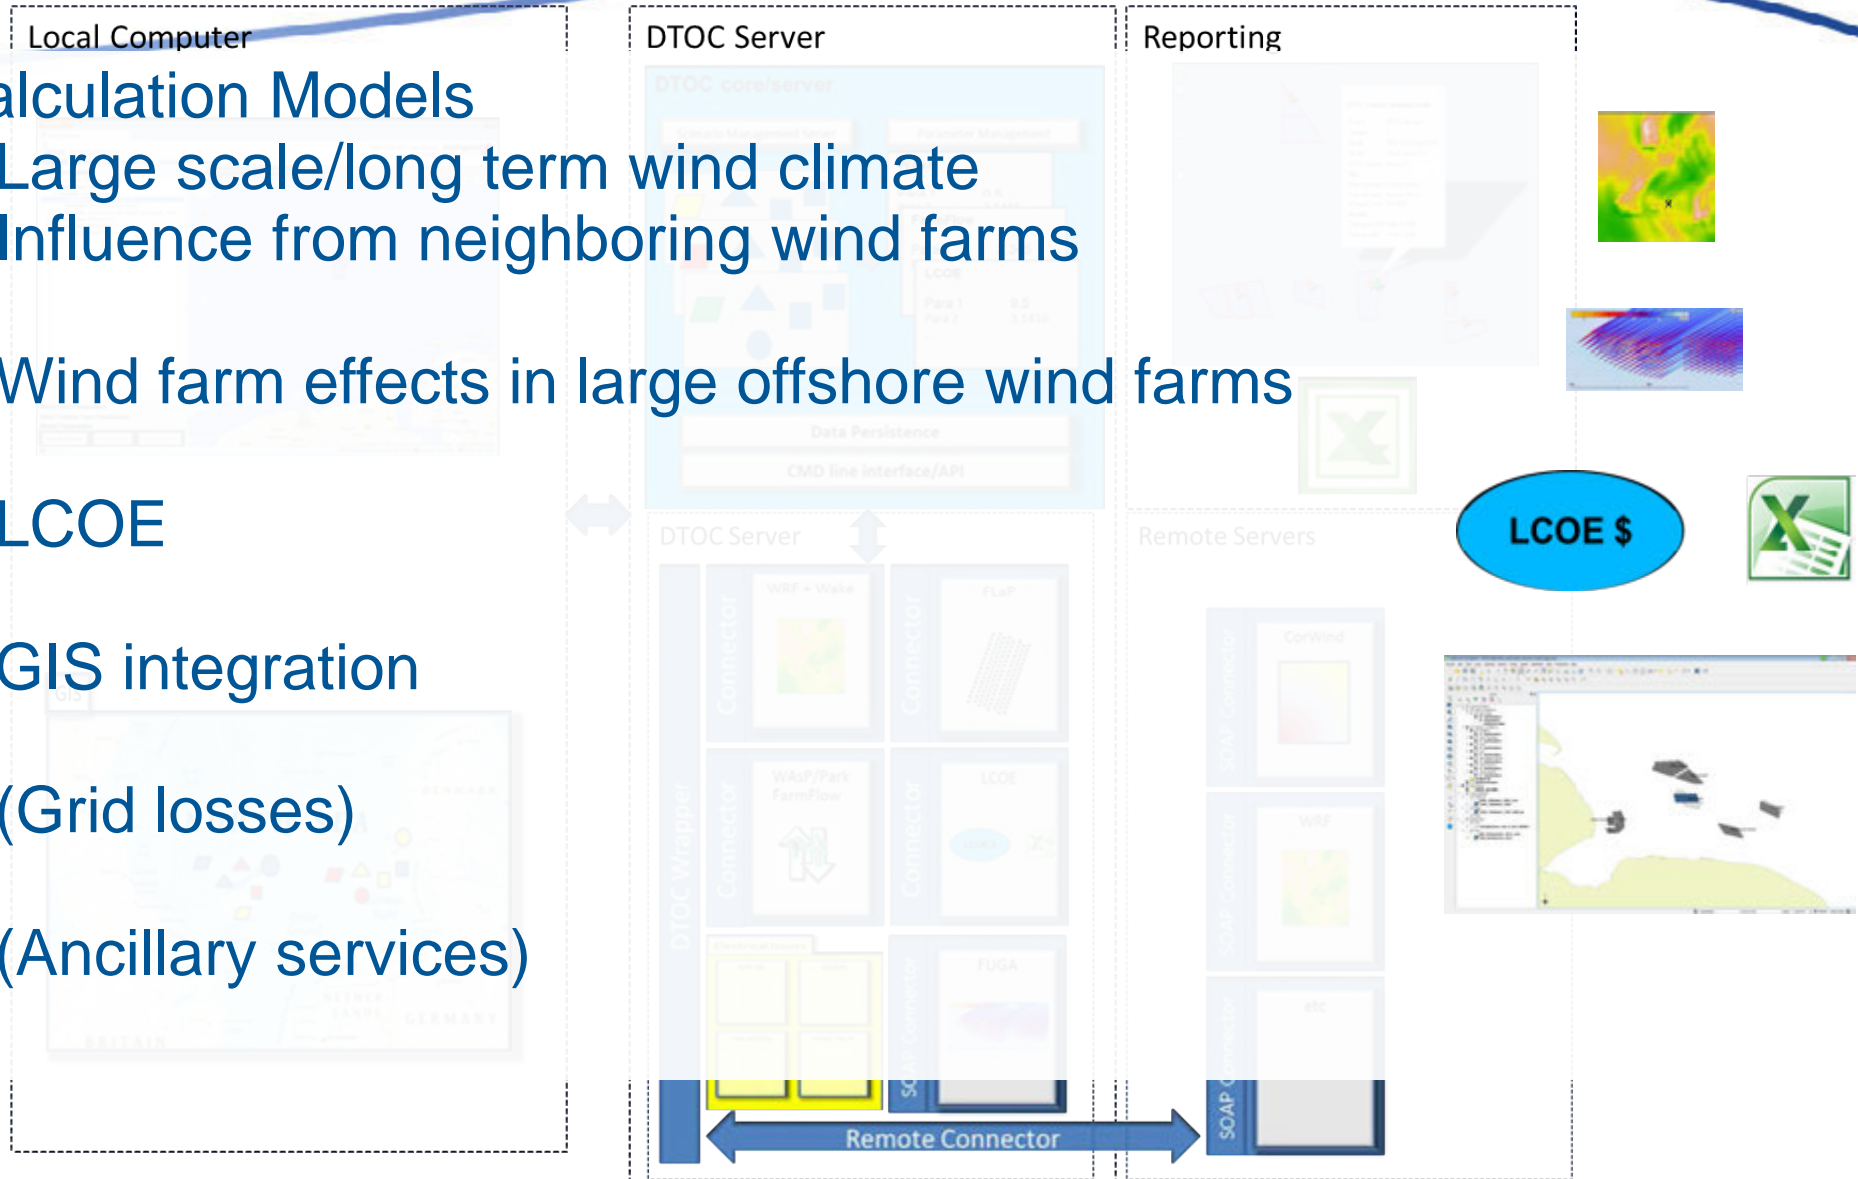

System overview

System overview

Calculation Models

- Large scale/long term wind climate
- Influence from neighboring wind farms
- Wind farm effects in large offshore wind farms
- LCOE
- GIS integration
- (Grid losses)
- (Ancillary services)

Wind Resource

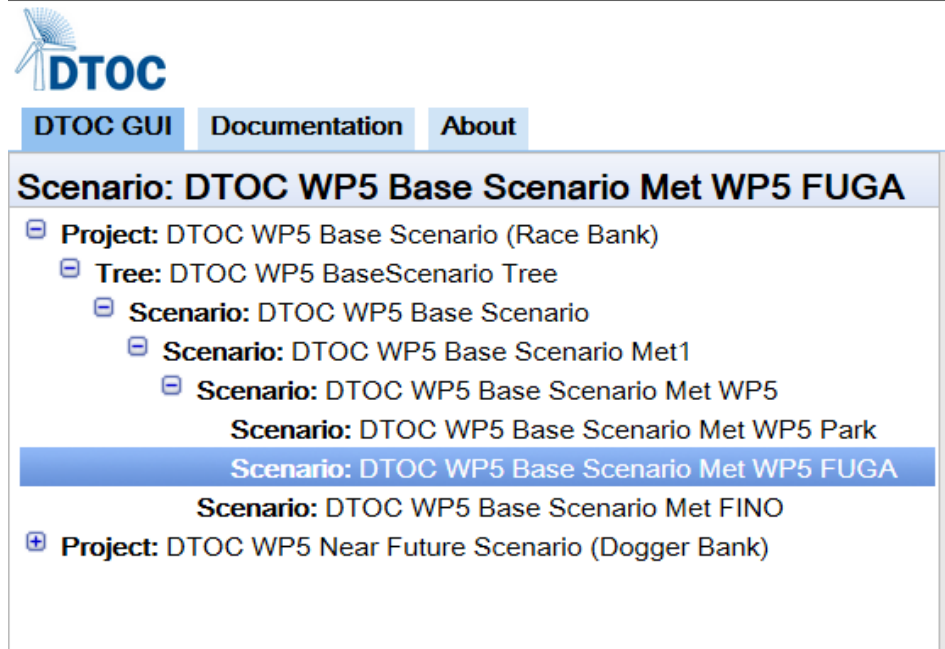

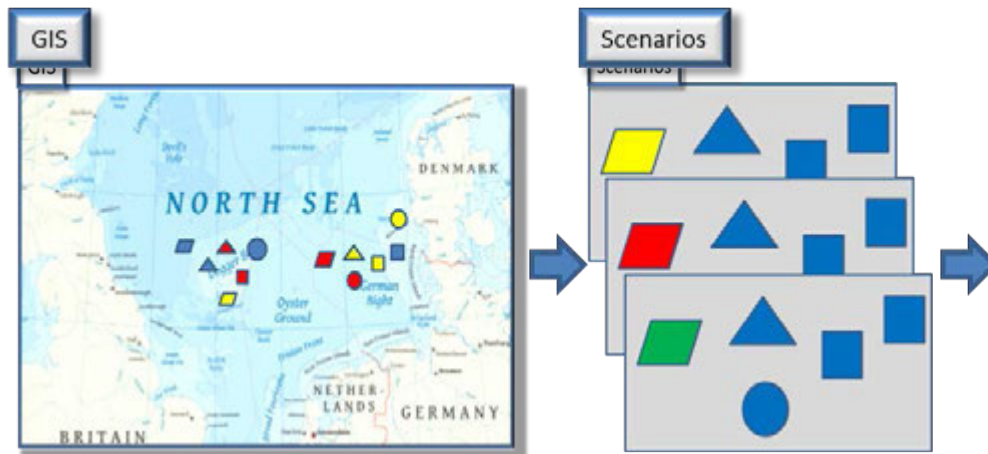

© Model Fuga V1.0 currently running in scenario DTOC WP5 Base Scenario Met WP5 FUGA

The screenshot displays the DTOC GUI interface. On the left, there is a navigation tree for scenarios, with 'Scenario: DTOC WP5 Base Scenario Met WP5 FUGA' selected. Below this are sections for 'Wind Farm Parameters' (listing Race Bank, Dudgeon, Inner Dowsing, Lincs, Lynn, Sheringham Shoal, Triton Knoll A, and Triton Knoll B) and 'Wind Turbine Type Parameters'. At the bottom left, there are buttons for 'Save scenario', 'Revert scenario', 'Execute scenario', 'Edit in GIS', 'Reload from GIS', 'Cancel GIS', and 'Wind Resource'. The main area is a map showing the Race Bank wind farm layout with a grid of turbines and a red outline. An 'Info' dialog box is open, stating: 'The calculations for fuga_V1_0 have been started. You will be notified when the results are available.' with a 'Close' button. The map also shows other wind farm areas like Triton Knoll B and Sheringham Shoal. The top right shows the user is logged in as 'Igor' and the 'overspeed' logo. The bottom right corner of the map area has a copyright notice: 'Kartendaten © 2014 Google - Nutzungsbedingungen'.

Scenario approach

- Organizing wind farm variants as scenarios
- Scenario tree: hierarchy
- Inheritance between branches and trees

	LCOE [%]	+100.00%	+99.20%	+105.50%
	delta LCOE [%]	+0.00%	-0.80%	+5.50%

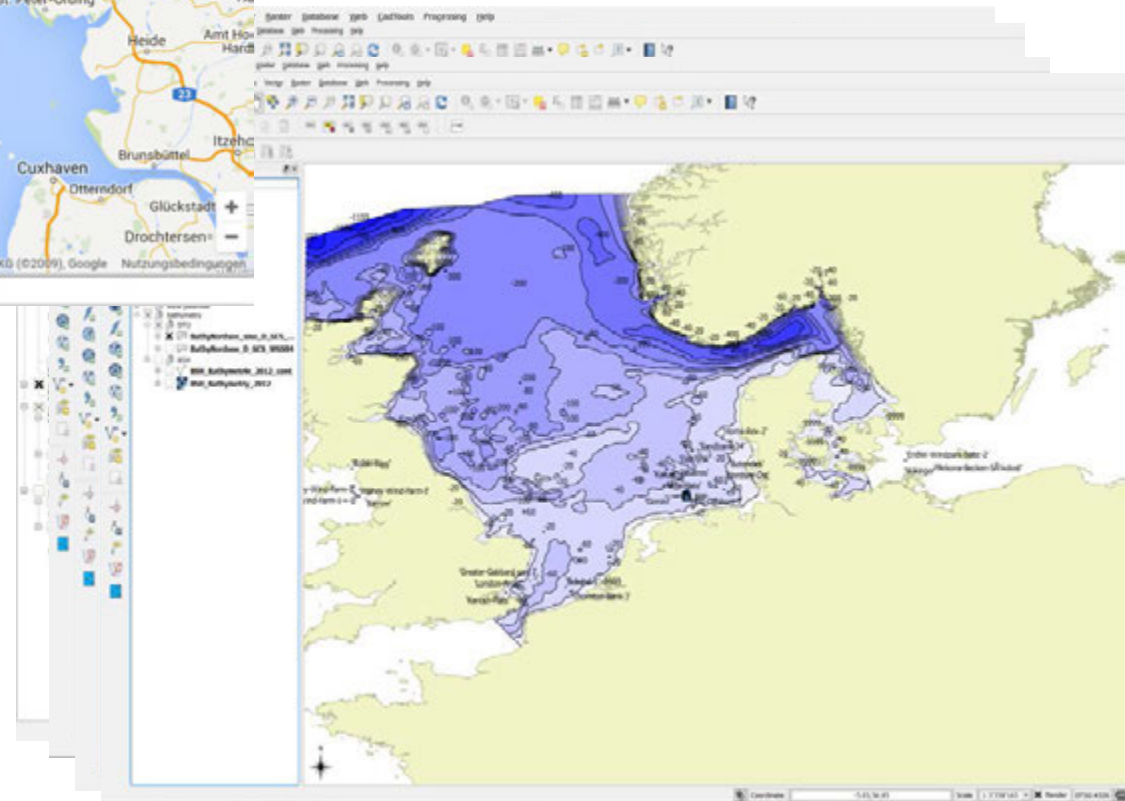

Local computer: GIS and local web browser

Web application

The screenshot shows an Android phone interface. At the top, the status bar displays the time as 14:27 and battery level at 54%. Below the status bar is a search bar containing the text "Android too!". The main content area displays the DTOC web application. The header includes the DTOC logo, navigation links for "DTOC GUI", "Documentation", and "About", and a user login status: "Logged in as dtoc overspeed" with a "Logout" link. The main content is titled "Scenario: WP5 Base Scenario" and lists several projects: "Project: WP5 Base Scenario (Race Bank), V 1.0 06.02.2015", "Tree: WP5 BaseScenario Tree", "Scenario: WP5 Base Scenario", "Project: WP5 Near Future Scenario (Dogger Bank), V 1.0 06.02.2015", and "Project: Borkum West, V 1.0 06.02.2015". Below the list are buttons for "Save scenario", "Revert scenario", "Execute scenario", "Edit in GIS", "Reload from GIS", "Cancel GIS", and "Wind Resource". A map of the North Sea region is visible on the right side of the screen.

Data

Conclusions

- Combined many existing models
- From meso-scale model input to farm model
- In a multi-user framework
- Supports optimisation

EERA DTOC project vision

*A robust, efficient, easy to use and flexible tool
created to facilitate the optimised design of
individual and clusters of offshore wind farms*
