

Environmental Stewardship, Safety, Health & Quality Policies:

Conduct of Research

We conduct research and analysis activities with objectivity and integrity and make the results broadly available, while protecting intellectual property and proprietary information. We use established protocols when conducting social and behavioral research involving human subjects.

Enterprise Management

We conduct all research and support functions to maximize the impact on our mission while adhering to applicable federal, state, and local statutes and regulations, and U.S. Department of Energy requirements, and we appropriately steward the property and budgetary resources entrusted to us. We never compromise on the quality of our products or services and we continually seek to improve the processes we use to implement our mission and operations.

Environmental Stewardship

We proactively seek ways to use resources sustainably in all research and operational activities and to minimize our impact on the environment. We serve as a credible resource for others who are seeking to minimize their environmental impact.

Safety, Health, and Security

Safety, health, and security are essential parts of every research program and operation. It is every worker's responsibility to protect his or her own health and safety as well as that of other workers, visitors, and the public. We manage access to the site, to information, and to information systems to ensure the safety and security of workers and to protect the campus, infrastructure, and research assets.
